# Ebeco Thermoflex Kit

*Thin and easily installed heating cable mat*

*The Ebeco Thermoflex Kit contains all you need for quick, simple installation of under-floor heating under a tiled or natural stone floor. Thermoflex is a self-adhesive heating cable mat in the form of vinyl mesh with heating cable attached to it at a specific spacing. This unique design gives a system which is easy to lay and which guarantees reliable underfloor heating for many years.*

## Ebeco Thermoflex Kit

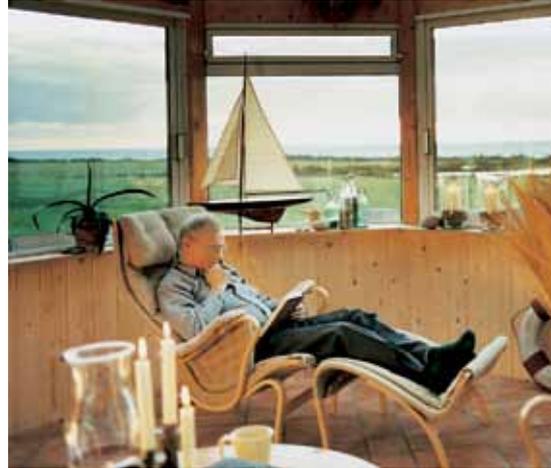

Ebeco Thermoflex Kit includes the EB-therm 355 digital thermostat. This thermostat is programmable, which means that you can set times and temperatures just the way you want. This gives you scope for optimal energy saving.

10 years guarantee with Ebeco Thermoflex Kit, including the thermostat.

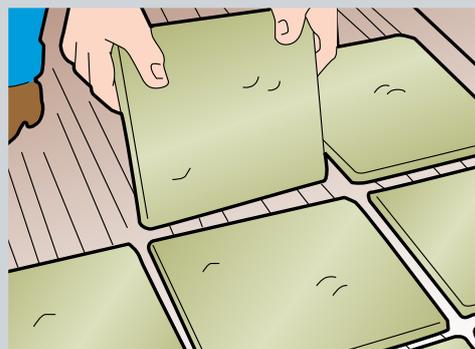

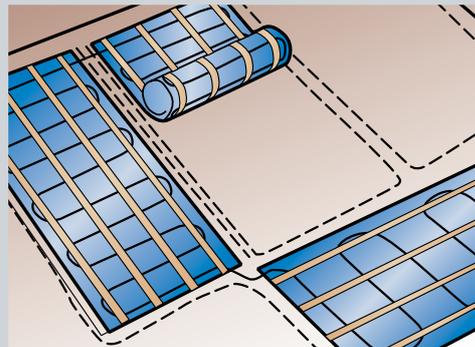

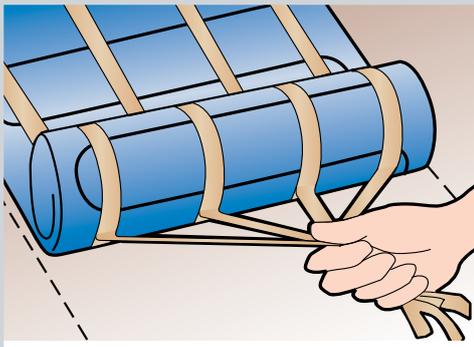

## Output 120 W or 160 W

Ebeco Thermoflex Kit is available with an output of either 120W/m<sup>2</sup> or 160W/m<sup>2</sup>. This enables the system to be installed not only inside your house, but also in high heat loss rooms, such as conservatories. The 120W kit is available in 13 sizes and the 160 W kit in 10 sizes. Both ranges include a complementary kit, without thermostat, so that mats can be added together to heat large areas.

## Installation

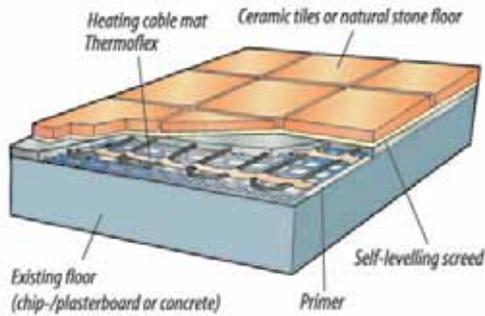

The Thermoflex mat is rolled out and fixed in the same operation, making it simple and quick to install. Thermoflex can easily be cut and positioned to cover the required area. It requires a 230 V supply and the power output is either 120W/m<sup>2</sup> or 160 W/m<sup>2</sup>. Thermoflex Kit 160 W/m<sup>2</sup> is too powerful to be used over timber or other flammable materials, and must only be installed on concrete floors.

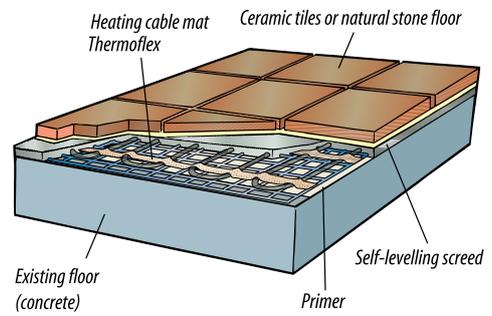

The pack contains detailed installation instructions, which can also be found at [www.ebeco.com](http://www.ebeco.com)

The underfloor heating system is a mains voltage installation and must therefore be installed and connected in accordance with the current national regulations.

## Configuration Ebeco Thermoflex Kit 120 W/m<sup>2</sup>

## Configuration Ebeco Thermoflex Kit 160 W/m<sup>2</sup>

Voltage: 230V
